

# Poolkeeper®

## ***Now Works with Above Ground or In-Ground Pools!***

### ***Automatically Maintains Pool Water at Pre-Set Level....***

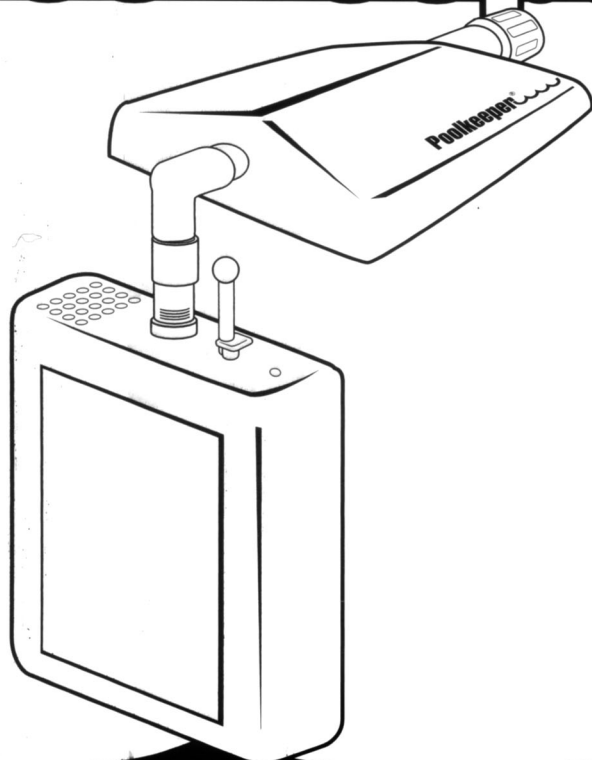

*As any responsible pool owner knows, pools lose water for a variety of reasons. Evaporation from sun and wind, loss from playful splashing, the water that gets carried out with emerging swimmers, and even minor leaks in the pool itself...*

***...if the water level drops below the skimmer and causes the pump to run dry, serious damage can occur!***

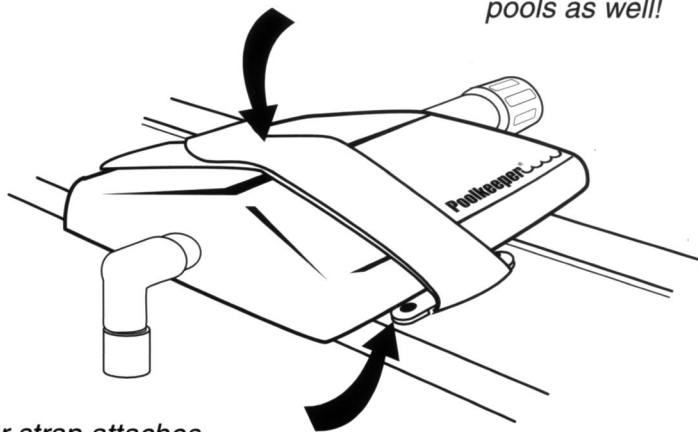

### ***But now, pool owners don't have to worry!***

*The Poolkeeper works to keep water levels stable around the clock! Like a paid attendant, the Poolkeeper monitors water levels and adds water when needed. Just a few easy connections to a standard garden hose (just a few more easy steps for above-ground pools) and Poolkeeper can be watching your pool too!*

# Poolkeeper®

Using our convenient new strap, **Poolkeeper** can now protect your above ground pools as well!

Our strap attaches easily to the supplied mounting brackets.

## Automatically Maintains Pool Water at Pre-set Level

### Features:

- ♣ Fits most pools, Above & In-Ground
  - ♣ Automatically maintains water level
